

Knife

Log

Washer

Description

Knife type Log Washer is usually used to clean and separate the silt and stains from manganese ore, iron ore and other low-grade mineral.

Rotary scrubber and log washer is a large mining equipment used to wash ores and stones in Ferrous metal and non-ferrous metallurgical mines, iron and steel, metallurgy, chemical industry and building materials. It has large processing

capacity, It's an ideal equipment for enterprises that meet the requirements of large productivity for the cleanliness of ores and stones.

It's good for washing fine particle size material.

Features

- ◆ **Log Washers ideal for scrubbing include a lot sticky clay materials such as gold,manganese ore,iron ore,phosphate, soft stone and cemented aggregate.**
- ◆ **Replaceable heavy duty knife type spiral washer.**
- ◆ **with heavy duty shafts**
- ◆ **Oversize bearings and gears**
- ◆ **Thick-walled shafts**
- ◆ **Adjustable water discharge gates on both sides of lower end of the tub**

Knife type log washer Technical Specifications

Model	Spiral Dia. (mm)	Rotating Speed (r/min)	Feeding size (mm)	Tank slope (°)	Output (t/h)	Power (kw)	Weight (t)
2RXL320	Φ320×3200	28	≤30	≤12	10	4	0.9
2RXL400	Φ400×4600	23	≤30	≤12	20	5.5	1.9
2RXL540	Φ540×4600	23	≤30	≤12	25	7.5	3.9
2RXL750	Φ750×7600	22.7	≤70	≤12	50	11	7.5
2RXL800	Φ800×7600	22	≤70	≤12	70	15	9.5
2RXL914	Φ914×7600	21	≤70	≤12	100	22	12.9
